Did you know?

Compensation for **internships** that exceed two months

WHAT THEY THINK?

Mouhamadou SYLLA

GMP Master's student,
Mechanical Engineer

My engineering studies were enhanced by a final internship as an R&D Engineer at ALSTOM. I learnt a lot from this internship both in terms of management and technical know-how and it strengthened my choice of professional career. The **iaelyon** GMP will offer me the best chances of success in my professional project. This Master's completes my engineering studies and helps me go beyond my technical skills, acquire managerial skills and thus, have both competences (engineer-manager).

Armin PALOS

IBR Master's student

As a first year Bachelor's student at **iaelyon**, I took advantage of a school's exchange agreement to study at McGill University in Montreal, whose Management Department ranks among the best in the world. Back to **iaelyon** as an IBR Master's student, I find the same multicultural environment, the same mindset and programs which in substance compete on an equal footing with Business Schools' across the Atlantic. It even seems to me that a particular skill is implicitly more developed here than elsewhere: « doing better with less », whether out of competitive or environmental concerns, a skill which turns out to be essential within the contemporary setting.
